EDUCATION

University of Michigan – Ann Arbor

Ann Arbor, MI

B.S. in Computer Science | **GPA: 3.8/4.0**

Expected: May 2028

Relevant Coursework: Data Structures & Algorithms, Advanced Operating Systems, Computer Architecture, Networks, Distributed Systems, Software Engineering, Object Oriented Programming, Discrete Mathematics, Linear Algebra

Activities: Michigan Data Science Team, MHacks, Michigan Mars Rover

EXPERIENCE

OneStream Software

June 2026 – August 2026

AI Product & Engineering Intern

Birmingham, MI

- Automated multi-day driver screening into a **2-hour** routine for **200+** consultants, saving **2,000** analyst hours
- Replaced **10** hours of manual selection per forecast with a Python feature-selection pipeline ranking **300+** signals
- Rebuilt the model's scoring to raise its true-driver hit rate from under **10%** to **85%** with zero false positives
- Eliminated seasonal-bias and data-leakage errors, verified against a **15-case** ground-truth test suite
- Shipped Driver Discovery as an MCP tool the forecasting AI agent calls on its own across **40+** live forecasts

HCL Global Systems

May 2025 – August 2025

Software Engineering Intern

Farmington Hills, MI

- Launched a recruiting platform matching **10,000** profiles to **250** roles, cutting shortlisting from **45** to **8** minutes
- Built a FastAPI search engine that blends keyword, semantic, and rule-based ranking for **86%** top-five relevance
- Replaced spreadsheet tracking with a role-based React dashboard running **1,000** searches a week at **99.9%** uptime
- Migrated **10,000** profiles from spreadsheets and PDFs into a normalized PostgreSQL database

Michigan Data Science Team

September 2024 – May 2025

Software Engineer Team Lead

Ann Arbor, MI

- Led **7** engineers building a system that forecasts U.S. air travel demand two years out across **1,800** city pairs
- Cut forecast error from **21%** to **13%** against a seasonal baseline with a LightGBM model over **40** demand signals
- Held error under **15%** across **6** years of backtests by building a leakage-free training pipeline
- Built a pipeline that regenerates every forecast in **20** minutes and keeps route and national totals consistent

PROJECTS

a2transit | [GitHub](#) | [Live App](#) | Python, FastAPI, PostgreSQL/PostGIS, Redis, React, TypeScript

- Unified Ann Arbor's city and university bus networks into one delay-aware, door-to-door trip planner
- Built the routing graph from **345,000** transit records and **8,300** generated PostGIS walking links between stops
- Cut route-planning latency to **3 ms** with a cached RAPTOR engine, **19** times faster than a Dijkstra baseline

CommonGround | [GitHub](#) | [Live App](#) | Python, FastAPI, PostgreSQL, React, TypeScript, scikit-learn, WebSockets

- Built a full-stack group music recommendation platform that turns clashing taste into one live playlist in **16 ms**
- Lifted retained recommendations from **40%** to **70%** across **200** simulated groups with collaborative filtering
- Kept the outvoted member's playlist rating at **4** stars in **85%** of groups with a fairness-aware ranker

Pulse | [GitHub](#) | [Live App](#) | TypeScript, Node.js, Express, PostgreSQL, React, Google Gemini, Server-Sent Events

- Built a full-stack, real-time stock-sentiment platform classifying **1,000** daily posts from **9** social and news feeds
- Cut Gemini classification volume **40%** by screening each post for a real ticker first
- Flagged **15** spikes ahead of news or price moves with a z-score anomaly detector, holding false alarms under **5%**

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, Java, C, HTML/CSS

Frameworks & Libraries: FastAPI, React, Node.js, Express, WebSockets, pytest, REST APIs

ML & AI: pandas, NumPy, scikit-learn, LightGBM, statsmodels, Matplotlib, MCP, Gemini API

Databases & Tools: PostgreSQL, Redis, pgvector, PostGIS · Git, AWS, Docker, CI/CD, GitHub Actions, Vercel
