EDUCATION

University of Michigan – Ann Arbor

B.S. in Computer Science

Ann Arbor, MI

Expected: May 2028

GPA: 3.8/4.0 | **Relevant Coursework:** Data Structures & Algorithms, Advanced Operating Systems, Computer Architecture, Networks, Distributed Systems, Software Engineering, Object Oriented Programming, Discrete Mathematics, Linear Algebra

EXPERIENCE

OneStream Software

June 2026 – August 2026

AI Product & Engineering Intern

Birmingham, MI

- Reduced multi-day pre-forecast driver screening to under **2** hours by deploying an automated Xperiflow Studio routine, saving **2,000** consultant-hours to date across **230+** Forecast consultants
- Built a Python VAR-Lasso pipeline ranking **300+** candidate signals and generators through per-target lag selection, LassoCV, and bidirectional Granger tests, replacing **14+** hours of manual driver selection per engagement
- Increased true-driver recall from **2.2%** to **90.3%** at **100%** precision across an automated suite of **15** deterministic ground-truth tests by redesigning contribution scoring, correcting seasonality defects, and resolving lag-zero errors
- Exposed Driver Discovery via MCP as a Forecast-agent tool returning ranked drivers and feature packages

HCL Global Systems

May 2025 – August 2025

Software Engineering Intern

Farmington Hills, MI

- Developed and launched an internal recruiting platform that matched **10,000+** consultant profiles to **250+** client requisitions, cutting median shortlisting time from **45** to **8** minutes for **12** recruiters
- Built a FastAPI ranking engine combining PostgreSQL keyword search, pgvector semantic retrieval, and rule-based reranking, with **86%** of top-five results rated relevant by recruiters and **95%** of searches completing within **240 ms**
- Shipped a role-based React dashboard with PII safeguards, audit logging, and Dockerized CI/CD deployment, replacing spreadsheet-based candidate tracking and serving **1,000+** recruiter searches weekly at **99.9%** uptime

Michigan Data Science Team

September 2024 – May 2025

Software Engineer Team Lead

Ann Arbor, MI

- Led a **7-person** team building a demand-forecasting system that projects U.S. air travel two years out across **1,800** origin-destination markets covering **90%** of passenger volume, supporting route and network planning
- Cut forecast error (WAPE) from **21%** to **13%** vs. a seasonal baseline and hit **82%** directional accuracy using a LightGBM panel model over **40+** indicators with leakage-safe pipelines and hierarchical reconciliation

PROJECTS

a2transit | [GitHub](#) | [Live App](#) | Python, FastAPI, PostgreSQL/PostGIS, Redis, React, TypeScript

- Unified Ann Arbor's city and university bus networks in a delay-aware, door-to-door journey planner by processing **345,160** transit records and generating **8,308** PostGIS walking connections
- Cut median route-planning latency to **3 ms**, **19×** faster than a Dijkstra reference, via a cached RAPTOR engine

CommonGround | [GitHub](#) | [Live App](#) | Python, FastAPI, PostgreSQL, React, TypeScript, scikit-learn, WebSockets

- Engineered a full-stack group music recommendation platform with three ranking modes, explainable recommendations, and real-time WebSocket voting, generating playlists in **16.4 ms** median latency
- Built an item-kNN/ALS collaborative-filtering engine and fairness-aware group ranker, achieving **3.1×** top-10 precision and **69×** catalog coverage over popularity while reducing strong-dislike violations to **0**

Pulse | [GitHub](#) | [Live App](#) | TypeScript, Node.js, Express, PostgreSQL, React, Google Gemini, Server-Sent Events

- Engineered a full-stack equity-sentiment platform processing **1,200 posts/day** across **9** feeds spanning Reddit, Hacker News, and financial news, eliminating **45%** before Gemini classification through SEC ticker validation
- Built a z-score anomaly detector with **69.6–99.9%** recall on **3×** spikes and a **0.05–0.20%** false-positive rate

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL, Java, C, HTML/CSS

Frameworks & Libraries: FastAPI, React, Node.js, Express, WebSockets, pytest, REST APIs

ML & AI: pandas, NumPy, scikit-learn, LightGBM, statsmodels, Matplotlib, MCP, Gemini API

Databases & Tools: PostgreSQL, Redis, pgvector, PostGIS · Git, AWS, Docker, CI/CD, GitHub Actions, Vercel
